DETAILED ACTION

1. The preliminary amendment filed 8/01/2001 has been entered. Claims 1-16 are pending in this Office action.
2. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

Drawings

3. Figures 1-5, the empty boxes in each of the Figures should be labeled.

Specification

4. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

5. The abstract of the disclosure is objected to because the abstract contains more than 150 words and only a single paragraph; and further the term "(Figure 8)" should be deleted. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 112

6. Claims 13, and 15-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 13, and 15 are indefinite because they are recited by drawings (i.e., claim 13 recites the Figure 8 ...). There is no step or means recited in the claims. It is unclear what process or apparatus applicant is intending to encompass. Examiner suggests redrafting the claims as series of steps or means. Such claims are held non-

enabling. The same comment applied to claim 16. Therefore, there is no art rejection made on claims 13, 15, and 16 in this Office action.

Allowable Subject Matter

7. Claims 1-12 and 14 are allowed.

8. The following is a statement of reasons for the indication of allowable subject matter: none of the prior art of the record discloses or suggests an arrangement for selecting largest of a plurality of input currents and adding a further current to the selected current, the arrangement comprising: a respective follower transistor connected between the input and the common point; a mirror transistor having its control electrode connected to the common point for producing a current whose value is related to the of the largest input current; a summing arrangement for adding the largest of the currents or a current proportional thereto to the further current or a current proportional thereto, the summing arrangement having a first input for receiving the current from the mirror transistor, a second input for receiving the further current, and an output; and means for coupling the output of the summing arrangement to the output of the arrangement as recited in claim 1.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Csanky (U.S. Pat. 5,889,430) discloses a current mode transistor circuit.

Klemmer (U.S. Pat. 6,255,897) discloses a current biasing circuit.

Redman-White et al (U.S. 2002/002237 A1) disclose a data decoding.

Redman-White et al (U.S. 6,798,726) disclose a data decoding
